

ALEXANDER STACK

Frontend Software Engineer | Angular | TypeScript | React | REST APIs | Playwright | Jest

Minneapolis, MN | (612) 719-1995 | alex_stack012@live.com | alexstackcodes.com | github.com/alexstack012 | linkedin.com/in/alex-stack

SUMMARY

Software Engineer with over 4 years of experience building Angular applications, primarily on enterprise projects in healthcare and global financial services. My strongest work is in Angular/TypeScript, API-driven UI development, reusable frontend architecture, and automated testing. I also independently build and deploy full-stack applications through my own company using Node.js, PostgreSQL, React, Playwright, Jest, and Cloudflare.

CORE SKILLS

Frontend: Angular, TypeScript, JavaScript (ES6+), React, RxJS, Angular Material, Material UI, HTML, CSS/SCSS, Responsive Design, Accessibility, SPA Architecture

Testing / QA: Playwright, Jest, Vitest, Unit Testing, Component Testing, End-to-End (E2E) Testing, Regression Testing, Cross-Browser Testing, API Testing, Postman

Backend / Data: Node.js, Express, REST APIs, PostgreSQL, MySQL, MongoDB, Java/Spring Boot, Python, SQL, Database Design

Platforms / Architecture / Engineering Practices: Browser Extensions, WebExtension APIs, Authentication & RBAC, Cloudflare Workers, CI/CD, Nx, Vite, Git/GitHub/GitLab, Agile/Scrum, API Integration, Performance Optimization, Responsive UI Development, Production Deployment

PROFESSIONAL EXPERIENCE

Founder & Software Consultant — Full Stack Innovations LLC

August 2026 – Present | Minneapolis, MN / Remote

- Founded and operate a software development company delivering custom web applications while developing commercial software products, owning product strategy, architecture, implementation, QA, deployment, and production support.
- Designed, developed, tested, and launched StackApply, a commercial browser extension architected for 5 browsers across 2 distribution builds, taking the product from initial requirements through Chrome Web Store release.
- Built a reusable quick-launch website platform spanning 16 templates, standardizing configurable content, styling, and deployment patterns to reduce duplicated implementation work across customer sites.
- Architected full-stack and frontend products using Angular, React, TypeScript, Node.js/Express, PostgreSQL, REST APIs, and Cloudflare, including authentication, database design, responsive interfaces, and production infrastructure.
- Established repeatable QA and release processes covering Playwright E2E testing, API validation, regression testing, and cross-browser testing across client and internally developed products.
- Manage the full client lifecycle from consultation and technical scoping through estimates, development, revisions, deployment, invoicing, and post-launch support while simultaneously maintaining the company's product portfolio.

Freelance Web Developer

Remote | Aug 2025 - Aug 2026

- Developed responsive websites, landing pages, and single-page applications using Angular, React, TypeScript, JavaScript, HTML, CSS, and modern UI practices for clients.
- Delivered a client website for AG Inspire using Angular 15, Angular Material, reusable components, and mobile-first styling from requirements through deployment.
- Configured hosting, DNS, SSL, custom domains, redirects, and deployment workflows using Cloudflare, GitHub, Wrangler, InMotion Hosting, and traditional hosting providers.

Brooksource / Centene - Mid-Level Software Engineer

Remote | Aug 2023 - Aug 2025

- Improved a frontend test suite of 6,000+ unit tests by removing duplicate and unused tests, reducing total runtime by approximately 40%.
- Built reusable Angular components, services, and pipes shared across multiple application workflows, including API-driven screens and common UI behavior.
- Built and maintained a complex event-based backend using Flowable Enterprise, including creating tasks, scripts, and automated API events in coordination and collaboration with several different teams with whom we all shared API dependencies. Then have the case converted to XML, creating python scripts for data consistency, and then updated the hosted GO service.
- Developed and enhanced enterprise Angular applications using Angular 13-15, TypeScript, Angular Material, REST APIs, and reusable component patterns.
- Integrated REST APIs and debugged frontend/backend data flow issues to resolve UI defects, workflow failures, and application behavior problems.

Doran Jones Inc. - Software Engineer

Remote / Tampa, FL | May 2022 - Aug 2023

- Built and maintained enterprise Angular applications using Angular 7, Angular 13, TypeScript, Angular Material, REST APIs, and Nx monorepo architecture.
- Created and maintained dozens of reusable features and UI components, validation workflows, and role-based functionality for an international HR application supporting a Fortune 50, worldwide Tier 1 bank.
- Contributed to backend development using Java/Spring, SQL, and REST APIs when cross-team work required additional engineering support.
- Mentored and trained junior developers on Angular, TypeScript, and core Frontend Development Principles.
- Participated in Agile ceremonies, code reviews, debugging sessions, and cross-functional collaboration with engineering teams.

Outspoke - Full Stack MERN Developer Intern

Remote | Feb 2022 - May 2022

- Built responsive React user interfaces and custom components using JavaScript, Material UI, HTML, and CSS while assisting backend development with Node.js, Express, and MongoDB.
- Performed manual QA testing across browsers and devices to improve and ensure responsiveness, usability, and accessibility in collaboration with developers and designers.

Selected Projects and Products

StackApply - Cross-Browser Job Application Automation Extension

Chrome Web Store & Firefox Extensions | Full Stack Innovations

- Designed, built, and released a production browser extension that detects application form fields, evaluates matches using confidence-based scanning, and autofills user data across multi-page job application workflows.
- Architected **2 distribution builds** to support **5 different browsers** Chrome, Brave, Opera, Edge, and Firefox; while handling differences in browser extension APIs, permissions, storage, and page behavior.
- Built reusable field-detection and autofill workflows supporting text inputs, selects, application-specific fields, education data, and other dynamic form structures while preserving manual review instead of automatically submitting applications.
- Performed systemic cross-browser QA across 5 browser targets, identifying browser-specific scanning and autofill failures and iterating on field matching, reporting, usability, and extension behavior before release and post-release support.
- Took the product through the full software lifecycle from requirements and architecture through development, QA, packaging, privacy/permissions review, Chrome Web Store submission, and production releases.

TTCA - Tabletop Campaign Archive | Full-Stack Angular/Express/PostgreSQL

GitHub: github.com/alexstack012/TTCA

Live: archive.alexstackcodes.com

- Built a full-stack campaign-management application using Angular 21, TypeScript, Express 5, and PostgreSQL, with authenticated editor workflows and a protected read-only portfolio demo.
- Designed normalized PostgreSQL schemas and repository-layer REST APIs for characters, locations, campaign sessions, lore, and plot points, including many-to-many relationships, transactional CRUD operations, and SQL-level visibility filtering.
- Implemented searchable and responsive Angular workflows with create, edit, delete, filtering, image-backed records, expandable details, and explicit loading, error, empty, and populated states.
- Secured the API with HMAC-signed sessions, role-based authorization, rate-limited authentication, Helmet, CORS, and production environment validation; added automated coverage using Vitest, the Node test runner, and Playwright across desktop and mobile Chromium.

ADDITIONAL EXPERIENCE

U.S. Army Reserve - 68J Medical Logistics Specialist

Fort Snelling, MN | 2009 - 2017

- Managed medical logistics, inventory readiness, and supply chain coordination in track with operational planning for field training or for supporting the Combat Support Hospital.
- Served in leadership and training roles where I oversaw 4-10 soldiers, including section-level leadership and cadre responsibilities during pre-deployment training exercises.
- Selected for ceremonial Color Guard duties supporting military funeral services, requiring precision drill and ceremony, professionalism, and accountability.

EDUCATION

Coding Dojo — Software Development Certificate | 2021

Full-stack training in MERN, Java/Spring Boot, Python/Flask, and MySQL

Lakeville South High School | High School Diploma | Completed early for Army enlistment | 2007 - 2010
